Enthusiastic and dedicated senior developer with seven years of experience in the software development environment. At present, I hold a BSc (Hons) in Computer Science. However, I am intent on furthering my qualifications and skills to remain at the cutting edge of my profession. Currently, I am focusing on developing my leadership skills. My technical knowledge covers the full software development lifecycle. I am proficient in a variety of embedded systems, languages and platforms. My next ideal job will be as a team lead or in mid-management.

HTML	Expert
Java / Java script	Experienced
.Net / .Net core	Expert
My SQL/ SQL server	Experienced
React	Skillful

WORK EXPERIENCE

Senior Developer   Jan 2018 - Present
Intercept IP, Huddersfield

I was initially appointed as a junior developer at this software development company and worked my way up to senior developer. My responsibilities include –

- Writing code to enable system acceptance criteria on user stories
- Ensuring adequate testing is done in code to ensure code works
- Checking the quality of colleagues' code by joining in peer review pull requests
- Bug fault diagnostics leading to the creation of workarounds and fixes
- Confirming adherence to Application of Testing Principles
- Participating and contributing to solution design workshops to make sure good architecture patterns are applied to features
- Advancing in-house technology stack to increase the performance of developers and systems requirements

Achievements
Created development best practices for my team in 2019, which has cut software rework time by 22% since then.
Wrote coding for a retail client's customer loyalty program that improved user experience and increased uptake by 45%.

Junior Developer   Mar 2015 - Dec 2017

Microsec Ltd - Plymouth

I joined this software development company as a graduate without any previous working experience. My duties included –

- Developing and documenting software design recommendations
- Optimising software and developing pre-emptive fixes
- Troubleshooting software and user problems
- Identifying underlying issues and providing solutions
- Escalating issues that required a higher level of experience
- Collaborating with testing team to test and debug applications
- Working with the team to realise and integrate client requests into functional code

---
